Interface Name *	NSLDS-COD Cohort Default Rate File				
Interface Type *	Unidirectional				
Interface Short Description *	<p>This document defines the processes utilized by COD and NSLDS to send Cohort Default Rate Files to COD via SAIG.</p> <p>With R13.2 NSLDS will begin to produce a new Cohort Default Rate file to provide COD with a weekly record of schools' cohort default rates. This file will be extracted and transmitted to COD on a weekly basis, specifically, Wednesday. The file will report all Cohort Default Rate data processed by NSLDS since the previous transmission.</p>				
Requesting (Source) Application *	NSLDS is the source application of the Cohort Default Rate file.

Section 2. Interface Overview

2.1. Flow Diagram

[Insert Diagram. Diagram should depict the destination points, transmission mechanism used for the exchange...]

2.2. Flow Diagram Description

1. The NSLDS system will initiate a process to extract the data and create the file for the Cohort Default Rate file.
2. NSLDS will transfer the file to COD's SAIG mailbox.
3. The COD scheduler will invoke the weekly file data load job upon the receipt of the Cohort Default Rate file.
4. The COD load data job will process the Cohort Default Rate file and load all information into the COD database

2.3. Usage Scenarios

NSLDS will send Cohort Default Rate files to COD every Wednesday.

Section 4. Interfacing System Responsibilities

4.1. Requesting (or Source) System Responsibilities

NSLDS

#	Description
1	NSLDS will extract Cohort Default Rate data from the NSLDS database.
2	The extracted data will be saved to a flat file
3	The data extracted will be formatted as specified in the File Specification section.
4	The "SAIG Header Record" will be the first record in the file. The "Header Record" will be the second record in the file marked with Record Type 000. The "Trailer Record" will be the second to last record in the file marked with Record Type 999. The "SAIG Trailer Record" will be the last record in the file.
5	NSLDS will transfer the file to COD via SAIG.

4.2. Responding (Receiving or Destination) System Responsibilities

COD

#	Description
1	COD will retrieve the file from SAIG.
2	COD will sweep up the staged Cohort Default Rate file and parser the data.
3	COD will write the data from the Cohort Default Rate file to the COD database.

Section 5. Business Rules and Logic

Type	Description
Alphanumeric	All characters will be left justified and padded with spaces. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Numeric/timestamp/date	All characters will be left padded with '0'. If it is blank/null, the length for the location of the field will be padded with '0'.
All fields	If the length of the source exceeds the maximum length of the data element, the source will be truncated according to business rules per field.
Record Type	Cannot be blank/null.
Main Institution ID	Cannot be blank/null.
Timestamp	Cannot be blank/null.
Cohort Year	Cannot be blank/null.
Cohort Default Rate Indicator	Cannot be blank/null.

Section 7. Interface Assumptions and Dependencies

7.1. Assumptions

#	Assumption
	Operational Assumptions
1	The NSLDS/COD systems execute in a batch TSO (time sharing option) environment.
2	COD and NSLDS will integrate with SAIG.
3	Batch job failures including errors integrating with SAIG will be captured by COD/NSLDS Operations.
4	zOS Language Environment with C/C++ support is available.
	Functional Assumptions
1	NSLDS DB2 contains information required to create the Cohort Default Rate file.
2	COD will process the Cohort Default Rate file. The rules for processing the file are beyond the scope of this document.
	COD will process all Cohort Default Rate files, including multiple files received in a week.
3	COD will not send a response or receipt file.

7.2. Dependencies

NSLDS is dependent on the network and Data Center managed by the VDC, and COD is dependent on the network managed by Amazon Web Services.

Purpose

The COD-NSLDS Call is a CICS (Customer Information Control System) transaction in which COD (Common Origination and Disbursement) system makes a request of borrower information from NSLDS (National Student Loan Data System) and NSLDS responds with loan detail data in a near real-time bi-directional exchange interface. The FSA Enterprise Service Bus (ESB) is utilized to conduct the flow of the transaction across the network. The purpose of this document is to describe the exchange which occurs between COD and NSLDS using XML (Extensible Markup Language).

System Identification

The following details the identifying information for each system involved in this interface:

System Responsibilities

The following describes the specific responsibilities of each system involved in this interface:

System Responsibilities
COD Request Responsibilities
COD request must contain the following data elements in this order: Borrower SSN, Borrower DOB, Borrower first name, and Borrower last name.
COD request will be transmitted within a SOAP request constructed according to ESB specifications.
ESB Data Routing Responsibilities
ESB provides an intermediate link between COD and NSLDS by providing the following Soap webservice endpoint for COD: NsldsBorrowerService#DirectLoanLookup
NSLDS Response Responsibilities
NSLDS receives the request file from COD.
NSLDS extracts data and sends to COD in an XML file. The data elements in the XML file are specified in the File Specification section.
NSLDS applies the following 8-character string to the beginning of each message: 'IA0000PS'
ESB Data Routing Responsibilities
ESB encapsulates the response from NSLDS within a SOAP envelope and returns to COD.
COD Response Responsibilities
COD receives output data from NSLDS.

Interface Control Specification

The following describes the specific responsibilities of each system involved in this interface

Interface Name:	COD-NSLDS CICS Call
NSLDS Program Name:	IA00 Direct Loan XML
Interface Type:	Bi-directional
Interface Short Description	IA00 Direct Loan XML is a CICS transaction that provides borrower loan detail data to COD through the Communication Area (COMMAREA) of the transaction. This transaction is executed when the CICS Distributed Processing Layer (DPL) bridge task retrieves a message to run the transaction from the CICS bridge queue and issues an EXEC CICS LINK command.
Source Application:	NSLDS is the source of the borrower and loan detail data
Destination Application:	COD is the recipient of the borrower and loan detail data
Interface Usage Frequency:	The interface is used on-demand each time the CICS DPL bridge task retrieves a message to run the transaction from the CICS bridge queue and issues an EXEC CICS LINK command.
Interface Usage Volume:	Current usage yields approx. 100,000 calls per day. Estimated to yield approx. 150,000 calls per day.

1.1. Interface Overview

Figure 0-1: High Level Flow Diagram

1.2. Interface Flow Diagram Description

1. COD initiates the CICS call by sending a request to NSLDS via the ESB.

2. The NSLDS IA00 Direct Loan XML program is called by a CICS DPL bridge task as the first step in a series of steps to provide data to a system requesting details on a borrower's loans.
3. The CICS DPL bridge task populates the CICS COMMAREA of the NSLDS IA00 Direct Loan XML program with input data used to identify a borrower.
4. The NSLDS IA00 Direct Loan processes the request.
5. When processing has completed, the IA00 Direct Loan XML program populates the CICS COMMAREA with the results of the request and issues a CICS RETURN to return the data to the requesting system.
6. NSLDS initiates reply to COD by sending the response via the ESB.

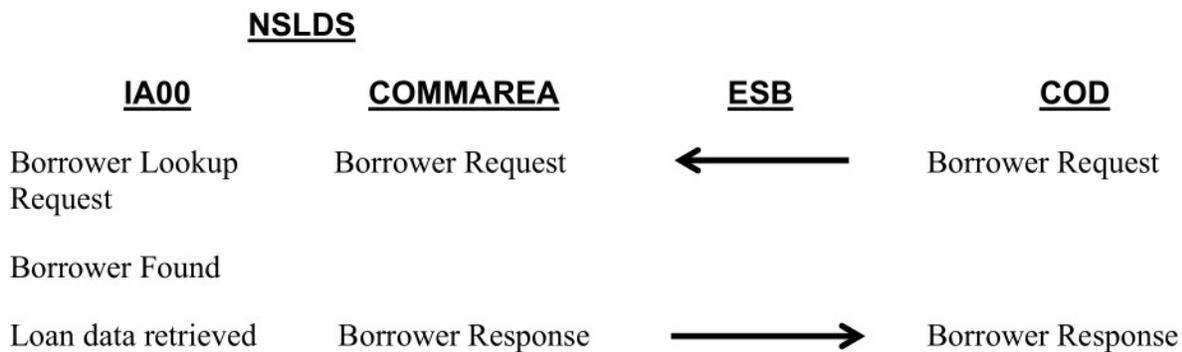

Figure 0-2: Flow Description Diagram

1.3. NSLDS IA00 Direct Loan XML

This interface enables NSLDS to respond to requests for borrower loan detailed information in near real-time. IA00 Direct Loan XML is a CICS transaction that provides borrower loan detail data to COD through the Communication Area (COMMAREA) of the transaction. This transaction is executed when the CICS Distributed Processing Layer (DPL) bridge task retrieves a message to run the transaction from the CICS bridge queue and issues an EXEC CICS LINK command.

The CICS transaction uses borrower identifier information [Social Security number (SSN), date of birth (DOB), borrower's first and last name] provided by the CICS DPL bridge task to uniquely identify one specific borrower. On successful identification, the transaction will retrieve the borrower's loan level details. The data are then placed in the COMMAREA for use by the CICS DPL bridge task.

IA00 accesses DB2 tables that are specific to a borrower's loans. This isolates database activity to minimize the impact on overall system performance. IA00 Direct Loan XML executes on a mainframe only on-request and is initiated by a system placing a message in the message queue used for initiating this routine. Only BATUSER is able to access this routine.

The data is sent and received according to XML 1.0 format using UTF-8-character encoding. Per the format,

“The ampersand character (&) and the left angle bracket (<) MUST NOT appear in their literal form, except when used as markup delimiters, or within a comment, a processing instruction, or a CDATA section.

Example:

[14] CharData ::= [^<&]* - ([^<&]* ']'>' [^<&]*)”

See www.w3.org for more information.

1.4. File Specification

Inputs:

The following record layout describes the required input details for the IA00 Direct Loan XML program:

Borrower Identifier Data

Entity Type	Attribute	Description	Type	Size
Student/ Plus_Borrower	Current SSN	Current SSN for a Title IV aid recipient	Num.	9

Entity Type	Attribute	Description	Type	Size
Student/ Plus_Borrower	Date of Birth	Date on which a Title IV aid recipient was born. Format: MM/DD/CCYY	Date	10
Student/ Plus_Borrower	Current Last	First 2 characters of current last name of a Title IV aid recipient	Char.	2

Outputs:

The following record layout describes the output detail for the IA00 Direct Loan XML program:

Data Element	Description	Field Format	Size
Borrower SSN	This is the Borrower's SSN that is entered by the user to retrieve student/borrower information.	Num.	9
Borrower DOB	This is the Borrower's date of birth that is entered by the user to retrieve student/borrower information. Format: MM/DD/CCYY	Date	10
Last Name	The Borrower's last name that is entered by the user to retrieve student information.	Char.	2
Reason Status	Constant. Valid values are: O – No Problems, S – System Error, N – Student Not Found, M – Multiple Students Found, NA – No Loans Found or None Matching Criteria, NB – No Outstanding Balance, D – Only Direct Loans Found, OM – More Data Exists Than Can Be Returned.	Char.	2
Borrower First Name	First Name of Borrower being reported.	Char.	12
Borrower Middle Initial	Middle Initial of Borrower being reported.	Char.	1
Borrower Last Name	Last Name of Borrower being reported.	Char.	35
OPEID	Concatenation of the School Code and the School Branch Code for the last institution at which the student received aid.	Char.	8
School Name	The name of the last institution at which the student received aid.	Char.	65

Data Element	Description	Field Format	Size
Anticipated Completion Date	Date on which the borrower is anticipated to graduate or complete coursework. Format: MM/DD/CCYY	Date	10
Enrollment Effective Date	Date as of which an Enrollment status is effective. Format: MM/DD/CCYY	Date	10
Enrollment Status	Code identifying the Enrollment status of a student: 'A' (Approved Leave of Absence) 'D' (Deceased) 'F' (Full Time) 'G' (Graduated) 'H' (Half Time) 'L' (Less than Half Time) 'Q' (Three-Quarter Time) 'W' (Withdrawn) 'X' (Never Attended) 'Z' (No Record Found)	Char.	1
Certification Date	The date of certification. Format: MM/DD/CCYY	Date	10
Loan Sequence Number	Designer-added attribute that will keep the Student NUMBER unique in cases where the value for NUMBER is the same for two different students. (It is possible for two different students to have the same SSN.)	Num.	4
Loan Date	This attribute is part of the identifier and has multiple sources depending on the type of loan (FFEL vs. campus-based) and the status of the loan. If the loan is a FFEL loan, then Date of Guaranty is populated into this field. This value will remain throughout the life of the loan. If the loan is campus-based, then the date of first disbursement is populated into this field. Format: MM/DD/CCYY	Date	10
Loan Type	An indicator for a specific loan program (for example, 'CL', Consolidated, 'FS', Federally Insured Student Loan).	Char.	2
OPEID	Concatenation of the School Code and the School Branch Code where the loan was initiated.	Char.	8
School Name	The name of the institution where the loan was initiated.	Char.	65
Status Type	An indicator for a specific loan program (for example, 'DA', Deferred, 'IG', In Grace Period).	Char.	2

Data Element	Description	Field Format	Size
Total Amount Disbursed	Denormalized, designer-added attribute indicating the TOTAL disbursement amount for a loan.	Num.	6
OPB	The whole dollar value of the declining balance due (principal only) on a Loan.	Num.	6
OPB Date	Date in which the value in Outstanding Balance field was updated or verified. Format: MM/DD/CCYY	Date	10
OIB	The whole dollar value of the declining accrued interest balance on a Loan.	Num.	6
OIB Date	The date in which the current outstanding Accrued Interest Balance Status became effective. Format: MM/DD/CCYY	Date	10
Interest Rate	For an FFEL Program Loan, this is the interest rate at the time the guaranty is made. For Perkins Loans, this is the interest rate when the loan is disbursed. Will contain decimal point.	Decimal (2.3)	6
Interest Rate Type	A code indicating whether the interest rate on a Perkins Loan or an FFEL Program Loan is variable (V) or fixed (F) for the life of a loan (may also be '8' for 8/10).	Char.	1
Source of Information	The GA Code for the GA reporting the information.	Char.	3
External Code	The value used by the external entity to identify the loan.	Char.	21
Direct Loan External Code	The value used by the Direct Loan Servicer to identify the loan.	Char.	21
Contact First Name	The first name of the contact person (where contact person is the servicer for all loans except Perkins, where contact person is the school).	Char.	12
Contact Last Name	The last name of the contact person.	Char.	35
Contact Organization Name	The name of the organization of the contact person.	Char.	65
Contact Address Line 1	Line one of the street address of the contact person.	Char.	50
Contact Address Line 2	Line two of the street address of the contact person.	Char.	50
Contact City	The city of the contact address.	Char.	20
Contact State	A 2-digit alphabetic code identifying the state of the contact address.	Char.	2
Contact ZIP Code	The postal ZIP code of the contact address.	Char.	9

Data Element	Description	Field Format	Size
Contact Phone	The phone number of the contact person.	Char.	12
Contact Phone Extension	The phone extension for the contact person.	Char.	5
Contact Organization Code	The Code of the organization of the contact person.	Char.	8
Contact Type	The category of contact person's organization.	Char.	6
NSLDS Label	An ID created by NSLDS for loans	Char.	17
Date of First Disbursement	The date a direct loan's first disbursement is issued. Format: MM/DD/CCYY	Date	10
Loan Status Date	Date the current loan status went into effect. Format: MM/DD/CCYY	Date	10
Loss of Subsidy Status	The subsidy status provided by NSLDS to the Federal Loan Servicer in the Subsidy Notification file.	Char.	1
Loss of Subsidy Status Effective Date	The effective date of the subsidy status provided by NSLDS to the Federal Loan Servicer in the Subsidy Notification file. Format: MM/DD/CCYY	Date	10
Student SSN	SSN of Student being reported on the PLUS loan. This data element will only be populated in the case of a PLUS loan. All other instances will be blank.	Num.	9
Student First Name	First Name of Student being reported on the PLUS loan. This data element will only be populated in the case of a PLUS loan. All other instances will be blank.	Char.	12
Student Last Name	Last Name of Student being reported on the PLUS loan. This data element will only be populated in the case of a PLUS loan. All other instances will be blank.	Char.	35
Academic Level	A code indicating the academic level of the applicant at the time of the prescreening.	Char.	1
Joint Consolidation Indicator	Indicates the consolidation loan being reported is a joint consolidation.	Char.	1
Underlying Parent PLUS Loan Indicator	Indicates the consolidation loan being reported includes one or more underlying Parent PLUS loans.	Char.	1
Repayment Plan Type	The repayment plan the borrower is using to repay their student loan.	Char.	2
Disclosure Date	The date that the loan entered a repayment plan type. Format: MM/DD/CCYY	Date	10

Data Element	Description	Field Format	Size
Repayment Suspension End Date	The date the period of the deferment, waiver or forbearance ended, or is scheduled to end. Format: MM/DD/CCYY	Date	10
IDR Anniversary Date	The reevaluation date is based on when the borrower initially entered the plan. Format: MM/DD/CCYY	Date	10
Family Size	Specifies the family size number provided by the applicant on the Income Driven Repayment application.	Char	2

Interface Assumptions and Dependencies

Interface Assumptions
Operational Assumptions
The maximum message length is 32k bytes due to limitations of COMMAREA.
WebSphere MQ Queue Manager is installed/configured for the NSLDS environment.
Job failures including errors generated by the ESB Bus adapters will be captured by Operations.
The ESB architecture is configured to support the transfer of data from COD to NSLDS.
Functional Assumptions
NSLDS contains information required to send borrower loan detail information.
COD will process the loan detail information XML file. The rules for processing the file are beyond the scope of this document.
COD will not create or send a response file.

Interface Dependencies
NSLDS is dependent on the network and Data Center managed by the VDC, and COD is dependent on the network managed by TSYS.

Appendix A – Codes and IDs

Loan Status Codes	
Code	Status
AL	Abandoned Loan
BC	Bankruptcy, Discharged

Appendix B - Request XML Schema

The following schema is used for SOAP request validation between COD and ESB.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema" xmlns:nslds="http://fsa.ed.gov/nslds"
  elementFormDefault="qualified" targetNamespace="http://fsa.ed.gov/nslds">

  <element name="BORROWERREQUEST" type="nslds:BorrowerRequestType"/>
  <complexType name="BorrowerRequestType">
    <sequence>
      <element minOccurs="1" maxOccurs="1" name="SSN">
        <simpleType>
          <restriction base="string">
            <minLength value="9" />
            <maxLength value="9" />
            <pattern value="[0-9]{9}" />
          </restriction>
        </simpleType>
      </element>
      <element minOccurs="1" maxOccurs="1" name="DATEOFBIRTH" type="date"/>
      <element minOccurs="1" maxOccurs="1" nillable="true"
        name="FIRSTTWOCHARSOFLASTNAME">
        <simpleType>
          <restriction base="string">
            <minLength value="1" />
            <maxLength value="2" />
            <pattern value="[A-Z]+"></pattern>
          </restriction>
        </simpleType>
      </element>
    </sequence>
  </complexType>
</schema>
```

During the pass through to NSLDS, ESB renames the following tags via XSLT transformations.

- FIRSTTWOCHARSOFLASTNAME -> LASTNAME

Doing so conforms the request to NSLDS's schema:

```
<xs:schema attributeFormDefault="unqualified" elementFormDefault="qualified"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:element name="BORROWERREQUEST">
    <xs:complexType>
      <xs:sequence>
        <xs:element type="xs:string" name="SSN"/>
        <xs:element type="xs:string" name="DATEOFBIRTH"/>
        <xs:element type="xs:string" name="LASTNAME"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

Appendix C - Request XML Sample

The following XML is an example SOAP request body used between COD and ESB.

```
<BORROWERREQUEST>  
<SSN>123456789</SSN>  
<DATEOFBIRTH>09/02/1982</DATEOFBIRTH>  
<FIRSTTWOCHARSOFLASTNAME>DO</FIRSTTWOCHARSOFLASTNAME>  
</BORROWERREQUEST>
```

Request body used between ESB and NSLDS, after XLST transformation.

```
<BORROWERREQUEST>  
<SSN>123456789</SSN>  
<DATEOFBIRTH>09/02/1982</DATEOFBIRTH>  
<LASTNAME>DO</LASTNAME>  
</BORROWERREQUEST>
```

Appendix D – Response XML Schema

Note: responses are not validated by ESB. A distinguishing tag in the response is LSTSCH.

Section 1. Interface Control Specification

Interface Name *	NSLDS TEACH Grant Service
NSLDS Program Name *	TEACH Grant Service
Interface Type *	Bi-directional
Interface Short Description *	WebSphere MQ interface between ESB and NSLDS SOAP over HTTPS interface between COD and ESB.
Destination Application:	NSLDS is the source of the TEACH Grant data which will be provided for each user requested.
Destination Interface:	ESB SOAP Endpoint: NslldsBorrowerService#TeachGrantLookup
Source Application:	NSLDS is the source of the student and TEACH Grant detail data.
Source Interface:	Queue Manager Name: <ul style="list-style-type: none"> • Production: NPP1 • Test: NPA1 Queue Names: <ul style="list-style-type: none"> • Production: NPP1.CICSNSLP.DPL.BRIDGE • Test: NPA1.CICSNSLA.DPL.BRIDGE
Interface Usage Frequency:	The interface is used on-demand each time COD makes a request for a student TEACH Grant data.
Interface Usage Volume:	Average usage yields approx. 500 calls per day. Peak usage yields approx. 750 calls per day.

Section 2. Interface Overview

2.1. Flow Diagram

2.2. Flow Diagram Description

1. COD initiates a call to NSLDS by sending a request to the ESB HTTPS SOAP endpoint NsldsBorrowerService#TeachGrantLookup. ESB extracts the Xml request and forwards to NSLDS.
2. NSLDS replies to COD by sending the response via the ESB SOAP endpoint. ESB encapsulates the xml response withing a SOAP envelope and returns the response to COD.

2.3. System Identification

The following details the identifying information for each system involved in this interface:

System Identification Information	
Type	Location
Requesting (COD)	
Production System Location	Columbus, GA
Contracting Organization	Accenture Federal
Developer Location	Washington, DC
Responding (NSLDS) System Additional Information	
Production System Location	Plano, TX
Contracting Organization	BRIEFCASE Systems Development, Inc. (BSD)
Developer Location	Arlington, VA
ESB System Additional Information	
Production System Location	Plano, TX
Contracting Organization	PPS and DELL Systems
Developer Location	Washington, DC

2.4. Component Identification

The following details the hardware and software components of each system involved in this interface:

System Hardware/Software Components			
Type	Vendor	Product Name	Version
Requesting (COD)			
Production Platform	AWS	EC2	M4
Operating System	Red Hat	Red Hat Enterprise Linux Server	7.6
Transmission Protocol	N/A	SOAP over HTTPS	1.2
Responding (NSLDS)			

Production Platform	IBM	Mainframe Server	Model 2096-S03
Operating System	IBM	zOS	2.1
DBMS	IBM	DB2	11.1
Transmission Protocol	IBM	WebSphere MQ	7.1.0
ESB (via request and response queue)			
Production Platform	HP	HP-UX	11i
Operating System	Red Hat	Red Hat Linux	2.6.18
Transmission Protocol	IBM	WebSphere MQ	7.5.0.2
Transmission Protocol (to COD)	N/A	SOAP	1.2

Section 3. Interfacing System Responsibilities

3.1. System Responsibilities

The following describes the specific responsibilities of each system involved in this interface:

System Responsibilities
COD Request Responsibilities
COD request file must contain the following data elements in this order: Borrower SSN, Borrower DOB, and first two characters of Borrower last name.
COD request will be transmitted within a SOAP request constructed according to ESB specifications.
ESB Data Routing Responsibilities
ESB provides an intermediate link between COD and NSLDS by providing the following SOAP endpoint: NsldsBorrowerService#TeachGrantLookup
NSLDS Response Responsibilities
NSLDS receives the request file from COD.
NSLDS extracts data and sends to COD in an XML file. The data elements in the XML file are specified in the File Specification section.
NSLDS applies the following 8 character string to the beginning of each message: 'IA0300PS'
ESB Data Routing Responsibilities
ESB provides an intermediate link between COD and NSLDS by providing the following response queue: Reply Queue Name: PRD001.TEACH.NSLDS.REPLY ESB forwards the response to the requesting COD SOAP webservice.
COD Response Responsibilities
COD receives output data from NSLDS.

Section 4. Business Rules and Logic

The following section outlines the business rules and validation logic.

Type	Description
Validation	SSN is not spaces Date of Birth is a valid date Last name is not spaces
Exception Processing	This procedure handles the following exception conditions: <ul style="list-style-type: none"> • Invalid SSN • Invalid DOB • Invalid Last Name • System Error • Student Not Found • Multiple Students Found • No TEACH Grants • More Data Exist Than Can Be Reported

Section 5. File Specification

5.1. Input and Output

Inputs:

The following record layout describes the required input details for the IA03 TEACH Grant XML program:

Student Identifier Data

Data Element	Description	Field Format	Min.	Max.	Required
Student SSN	Current SSN for a Title IV aid recipient	String	9	9	Y
Student Date of Birth	Date on which a Title IV aid recipient was born. Format: MM/DD/CCYY	Date	10	10	Y
Student Last Name	First 2 characters of current last name of a Title IV aid recipient <i>Note: If the last name is greater than or equal to 2 characters, the first 2 letters will be sent.</i> <i>If the last name is 1 character, the 1 character will be sent.</i> <i>If there is no last name, "NL" will be sent (NSLDS will send back, "NL" as the request when "NL" is sent).</i>	String	1	2	Y

Outputs:

The following record layout describes the output detail for the IA03 TEACH Grant XML program:

Data Element	Description	Field Format	Min.	Max.	Required
Student SSN	SSN sent by COD to NSLDS is returned in this data element	String	9	9	Y
Student Date of Birth	Date of Birth sent by COD to NSLDS is returned in this data element	Date	10	10	Y
Student Last Name	First 2 characters of current last name or 'NL' sent by COD to NSLDS is returned in this data element	String	2	2	Y

Data Element	Description	Field Format	Min.	Max.	Required
Student First Name	First Name of Student being reported. If no First Name, NF will be sent	Char.	1	30	Y
Student Middle Initial	Middle Initial of Student being reported.	Char.	1	1	N
Student Last Name	Last Name of Student being reported. If no Last Name, NL will be sent	Char.	1	35	Y
School Name	The name of the last institution at which the student received aid.	Char.	1	65	N
Grant Reporting Institution Campus (OPEID)	OPE ID of the School associated to the TEACH Grant.	Num.	8	8	Y
Award ID	Award ID of the TEACH Grant.	Num. Char.	21	21	N
Award Type	Award Type of the TEACH Grant.	Char.	2	2	N
Award Year	The Award Year of the TEACH Grant.	Num.	4	4	N
Accepted Award Amount	Award Amount of the TEACH Grant.	Num.	1	7	N
Award Amount Paid To Date	Actual Disbursed Amount of the TEACH Grant.	Num.	1	7	N
First Disbursement Date	Earliest disbursement date with an actual disbursed amount > \$0, which NSLDS collects from the AI record with grant submissions. Format: MM/DD/CCYY	Num.	10	10	Y
Grant Date of Last Update	The date of the latest update to the TEACH Grant. Format: MM/DD/CCYY	Date	10	10	N

Data Element	Description	Field Format	Min.	Max.	Required
Year in School (Grade Level)	Academic Level of the TEACH Grant: 0 or 1 = Freshman 2 = Sophomore 3. = Junior 4 = Senior 5 = Baccalaureate 6 & 7 = Graduate/Professional	Num.	1	1	Y
Grant Status	The Current Status of the TEACH Grant. AS = Agreement to Serve LN = Converted to D8 loan LC = Life Circumstances DE = Death Discharge DI = Grant Transferred to TPD CA = Cancelled SF = Satisfied in Full	Char.	2	2	Y
Grant Status Date	The Current Status date on which the Grant Status was given. Format: MM/DD/CCYY	Date	10	10	N
Grant Life Circumstance Type	The Current Grant Life Circumstance type. Types of Grant Life Circumstances for the associated TEACH Grant. EP = Enrolled in Elig. Program FM = Family Medical Leave Act MO = Military Operations UK = Unknown This tag is only sent when Grant Status = LC	Char.	2	2	N
Grant Life Circumstance Begin Date	The date on which the Current Life Circumstance begins. Format: MM/DD/CCYY This tag is only sent when Grant Status = LC	Date	10	10	N

Data Element	Description	Field Format	Min.	Max.	Required
Grant Life Circumstance End Date	The date on which the Current Life Circumstance ends. Format: MM/DD/CCYY This tag is only sent when Grant Status = LC	Date	10	10	N
Teacher Years Completed	Number of completed years of service as a Qualified Teacher	Num.	1	2	N
Contact Organization Code	The Code of the organization of the contact person.	Char.	1	8	N
Reason Status	Constant. Valid values are: O – No Problems, S – System Error, N – Student Not Found, M – Multiple Students Found, NA – No Grants Found, OM – More Data Exists Than Can Be Returned.	Char.	1	2	Y

Section 6. Interface Assumptions and Dependencies

6.1. Assumptions

#	Assumption
	Operational Assumptions
	N/A
	Functional Assumptions
1	NSLDS contains information required to send TEACH student detail information.
2	COD will process the TEACH grant detail information XML file. The rules for processing the file are beyond the scope of this document.
3	COD will not create or send a response file.
4	NSLDS will not send multiple <Award> blocks for the same student with the same Award ID value.
5	If NSLDS does not have data for an optional XML tag, NSLDS shall not send COD that XML tag.
6	The General Design Document for this CR, 3208/111052, will indicate which TEACH Grant data values will be displayed on StudentLoans.gov TEACH Exit Counseling completion process. It will also indicate how each value will displays on StudentLoans.gov, including in cases where the XML tag for any data value is not received by COD in the NSLDS output file.
7	If any <i>required</i> XML tag in the interface is absent from the Input or Output, or if the value inside any XML tag falls outside the Minimum or Maximum character limits for that tag, the interface will fail. The StudentLoans.gov user will experience an error page.
8	NSLDS shall only send COD the Grant Life Circumstance Type, Grant Life Circumstance Begin Date, and Grant Life Circumstance End Date Tags in the XML Response when the Grant Status is Life Circumstance (LC).
9	NSLDS shall send COD the most recent Grant Life Circumstance Type on file at NSLDS.

6.2. Dependencies

#	Dependencies
1	NSLDS is dependent on the network and Data Center managed by the VDC, and COD is dependent on the network managed by TSYS.

Appendix C - Request XML Schema

The following schema is used for SOAP request validation between COD and ESB.

```
<schema xmlns="http://www.w3.org/2001/XMLSchema" xmlns:nslds="http://fsa.ed.gov/nslds/teach"
  elementFormDefault="qualified" targetNamespace="http://fsa.ed.gov/nslds/teach">

  <element name="BORROWERREQUEST" type="nslds:StudentTeachRequestType"/>
  <complexType name="StudentTeachRequestType">
    <sequence>
      <element minOccurs="1" maxOccurs="1" name="SSN">
        <simpleType>
          <restriction base="string">
            <minLength value="9" />
            <maxLength value="9" />
            <pattern value="[0-9]{9}" />
          </restriction>
        </simpleType>
      </element>
      <element minOccurs="1" maxOccurs="1" name="DATEOFBIRTH" type="date"/>
      <element minOccurs="1" maxOccurs="1" nillable="true"
        name="FIRSTTWOCHARSOFLASTNAME">
        <simpleType>
          <restriction base="string">
            <minLength value="1" />
            <maxLength value="2" />
            <pattern value="[A-Z]+"></pattern>
          </restriction>
        </simpleType>
      </element>
    </sequence>
  </complexType>
</schema>
```

During the pass through to NSLDS, ESB renames the following tags via XSLT transformations.

- FIRSTTWOCHARSOFLASTNAME -> LASTNAME

Doing so conforms the request to NSLDS's schema:

```
<xs:schema attributeFormDefault="unqualified" elementFormDefault="qualified"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:element name="BORROWERREQUEST">
    <xs:complexType>
      <xs:sequence>
        <xs:element type="xs:string" name="SSN"/>
        <xs:element type="xs:string" name="DATEOFBIRTH"/>
        <xs:element type="xs:string" name="LASTNAME"/>
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

Appendix D - Request XML Sample

The following XML is an example SOAP request body used between COD and ESB.

```
<BORROWERREQUEST>  
<SSN>123456789</SSN>  
<DATEOFBIRTH>09/02/1982</DATEOFBIRTH>  
<FIRSTTWOCHARSOFLASTNAME>DO</FIRSTTWOCHARSOFLASTNAME>  
</BORROWERREQUEST>
```

Request body used between ESB and NSLDS, after XLST transformation.

```
<BORROWERREQUEST>  
<SSN>123456789</SSN>  
<DATEOFBIRTH>09/02/1982</DATEOFBIRTH>  
<LASTNAME>DO</LASTNAME>  
</BORROWERREQUEST>
```

Appendix E - Response XML Schema

Note: responses are not validated by ESB. A distinguished tag in the response is OPEID.

Section 1. Interface Control Specification

Interface Name *	NSLDS – COD Exit Counseling Reject Processing
Interface Type *	Unidirectional
Interface Short Description *	This document defines the processes utilized by COD and NSLDS to transport Exit Counseling reject files from NSLDS to COD via SAIG. NSLDS produces the Exit Counseling file to provide COD with a daily record of rejected exit counseling data. This file will be transmitted to COD Monday to Friday. This file will report all exit counseling rejected records since the previous transmission.
Requesting (Source) Application *	NSLDS
Responding (Receiving or Destination) Application *	COD

Section 2. Interface Overview

2.1. Flow Diagram

2.2. Flow Diagram Description

1. The NSLDS system will initiate a process to extract the data and create the file for the Exit Counseling Reject file.
2. NSLDS will send the file to COD's SAIG mailbox.
3. COD will retrieve the file from their SAIG mailbox.
4. The COD load data job will process the Exit Counseling Reject file and load all information into the COD database

2.3. Usage Scenarios

NSLDS will send the Exit Counseling Reject File to COD every business day.

Section 3. System Information

3.1. Requesting (or Source) System Information

#	Type	
1	Production System Location	Plano, TX
2	Contracting Organization	BRIEFCASE Systems Development, Inc. (BSD)
3	Developer Location	Arlington, VA

3.2. Responding (Receiving or Destination) System Information

#	Type	
1	Production System Location	Amazon Web Services GovCloud West
2	Contracting Organization	Accenture
3	Developer Location	Washington, DC

Section 4. Interfacing System Responsibilities

4.1. Requesting (or Source) System Responsibilities

NSLDS

#	Description
1	NSLDS will save rejected Exit Counseling records to a flat file.
2	The rejected Exit Counseling records will be formatted as specified in the File Specification section.
3	The "SAIG Header Record" will be the first record in the file. The "Header Record" will be the second record in the file. The "Trailer Record" will be the second to last record in the file. The "SAIG Trailer Record" will be the last record in the file.

4.2. Responding (Receiving or Destination) System Responsibilities

COD

#	Description
1	COD will receive the Exit Counseling Reject File
2	COD will sweep up the staged Borrower Outstanding Balance file and parser the data.
3	COD will write the data from the Borrower Outstanding Balance file to the COD Oracle database

Section 5. Business Rules and Logic

Type	Description
Alphanumeric	All characters will be left justified and padded with spaces. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Numeric/timestamp/date	All characters will be left padded with '0'. If it is blank/null, the length for the location of the field will be padded with '0'.
All fields	If the length of the source exceeds the maximum length of the data element, the source will be truncated.
Input Record	The input record will contain the entire exit counseling outgoing (from COD to NSLDS) record. The input record can be a record type 001 or 002. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Field Code	The code for the field in error. If blank/null, pad with spaces
Error Code	The code indicating the error associated with the field code. If blank/null, pad with spaces.
Filler	The fillers shall always be blank or populated with zeros.

Section 7. Interface Assumptions and Dependencies

7.1. Assumptions

#	Assumption
	Operational Assumptions
1	COD will treat all spaces as nullable fields.
	Functional Assumptions
1	NSLDS will create and send rejected Exit Counseling files to COD.
2	COD will process and store the response file.

7.2. Dependencies

#	Dependencies
2	NSLDS is dependent on the network and Data Center managed by the VDC, and COD is dependent on the network managed by Amazon Web Services.

Interface Name *	COD/EDW&A-NSLDS Enrollment Data File
Interface Type *	Unidirectional
Interface Short Description *	<p>This document defines the processes utilized by COD/EDW&A and NSLDS to transmit the Enrollment Data Files via SAIG (Student Aid Internet Gateway).</p> <p>NSLDS will create the Enrollment Data Files to provide COD/EDW&A with the enrollment data of students. The Enrollment Data Files will consist of eight different detailed record layouts which will be associated to eight different data sources. The file name will help COD/EDW&A identify what is the source of the data. The Enrollment Data Files will be accepted and processed by COD/EDW&A. This file will contain enrollment data. The data transmitted will be in ASCII format.</p>
Requesting (Source) Application *	NSLDS is the source application of the Enrollment Data File

**Interface Usage
Frequency ***

NSLDS will send a one-time initial load file for the existing enrollment data on July 18, 2014 (Friday). After this initial one-time load, NSLDS will send the enrollment data files to COD/EDW&A once a month on the third Friday of the month with the changes that occurred within that month. Monthly changes include all the added and updated records since the last time that the files were sent.

Interface Usage Volume *

Volumes are listed per send and will be divided amount the files sent.

Section 2. Interface Overview

2.1. Flow Diagram

2.2. Flow Diagram Description

1. The NSLDS system will initiate a process to create the Enrollment Data Files.
2. NSLDS will send the files to COD/EDWA via SAIG.
3. The COD/ EDW&A scheduler will invoke the COD/ EDW&A Midrange server when a file is received and a Load data job will then process the Enrollment Data File.

2.3. Usage Scenarios

NSLDS will send the enrollment data files to COD every third Friday of the month.

Section 4. Interfacing System Responsibilities

4.1. Requesting (or Source) System Responsibilities

NSLDS

#	Description
1	NSLDS will create an enrollment data flat files formatted as specified on the File Specification section.
2	The detailed records will contain students' identifier information necessary to retrieve enrollment status. The order of the "NSLDS Detail Records" is not significant. There are no dependencies between detailed records.
3	NSLDS will send the file to COD/EDWA via SAIG.

4.2. Responding (Receiving or Destination) System Responsibilities

COD/EDW&A

#	Description
1	COD/EDW&A will receive the enrollment data files on its server
2	COD/EDW&A will load the Enrollment Data into its database

Section 5. Business Rules and Logic

This interface enables NSLDS to send Enrollment Data files to COD/EDW&A. These flat files will be sent through SAIG. The files fill have an initial one-time load followed by a monthly feed. There will be one type of record within the Enrollment Data Files:

- **Enrollment Data Detailed Record** - The Enrollment Detailed Record provides COD/EDW&A with students' enrollment information.

The NSLDS will provide COD/EDW&A with 8 different files. The difference between the files will be the file layout of the Enrollment Data Detailed Record. The following are the file layouts available for each type of detailed record:

- Student record file layout
- Anticipated completion record file layout
- Certification record file layout
- Enrollment record file layout
- Enrollment credential record file layout
- Enrollment term record file layout
- Enrollment program file layout
- Enrollment program stat layout
-

For the monthly feed, the NSLDS shall be able to send all the added and updated records since the last time that the files were sent. COD/EDW&A shall be able to store the enrollment data in its database and update where appropriate. The NSLDS shall provide the record count of each file transmission.

Type	Description
Alphanumeric	All characters will be left justified and padded with spaces. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Numeric/timestamp/date	All characters will be left padded with '0'. If it is blank/null, the length for the location of the field will be padded with '0'.
All fields	If the length of the source exceeds the maximum length of the data element, the source will be truncated.

Section 7. Interface Assumptions and Dependencies

7.1. Assumptions

#	Assumption
	Operational Assumptions
1	The NSLDS system execute in a batch TSO (time sharing option) environment.
2	Both COD and NSLDS will integrate with SAIG.
3	Batch job failures including errors integrating with SAIG will be captured by COD/EDWA/NSLDS Operations.
4	zOS Language Environment with C/C++ support is available in NSLDS.
	Functional Assumptions
1	The rules for processing the file are beyond the scope of this document.
2	COD/EDW&A will store and process the Enrollment Data files from NSLDS.

7.2. Dependencies

NSLDS is dependent on the network and Data Center managed by the VDC, and COD/EDW&A is dependent on the network managed by Amazon Web Services.

Section 1. Interface Control Specification

Interface Name	COD-NSLDS 150% Subsidy Limit Legislation
Interface Type	Unidirectional
Interface Short Description	This interface is for the transfer of the BOB data from NSLDS that is reported to COD for SULA determinations via SAIG. NSLDS produces the BOB file to provide COD with a record of loan's outstanding loan balance indicators. This file will be extracted and transmitted to COD. The file will report an indicator if a loan has an outstanding loan balance on the NSLDS
Requesting (Source) Application	NSLDS
Responding (Receiving or Destination) Application *	COD System
Technical Requirement References	Source TG Mailbox (Production): TG50012 Source TG Mailbox (Test): TGM8699 Message Class (Production): NSLBOBOP Message Class (Test): NSTBOBOP Destination TG Mailbox (Production): TG71900 Destination TG Mailbox (Test): TGS2700
Interface Usage Frequency	NSLDS will transmit one file per week to COD.
Interface Usage Volume	TBD

Section 2. Interface Overview

2.1. Flow Diagram

2.2. Flow Diagram Description

1. The NSLDS system will initiate a process to extract the data and create the file for the Borrower Outstanding Balance file.
2. NSLDS will transfer the file to COD via SAIG.
3. The COD scheduler will invoke the weekly file data load job upon the receipt of the Borrower Outstanding Balance file.
4. The COD load data job will process the Borrower Outstanding Balance file and load all information into the COD database

2.3. Usage Scenarios

Only FFEL and Direct Loan program data from NSLDS will be included in the new Loan-Level BOB file and used for SULA determinations.

Section 3. System Information

3.1. Requesting System Information

#	Type	
1	Production System Location	Plano, TX

3	Developer Location	Washington, DC

Section 4. Interfacing System Responsibilities

4.1. Requesting (or Source) System Responsibilities

NSLDS Functional Specifications

#	Description
1	NSLDS will extract Borrower Outstanding Balance data from the NSLDS database.
2	The extracted data will be saved to a flat file
3	The data extracted will be formatted as specified in the File Specification section.
4	The "SAIG Header Record" will be the first record in the file. The "Header Record" will be the second record in the file marked with Record Type 000. The "Trailer Record" will be the second to last record in the file marked with Record Type 999. The "SAIG Trailer Record" will be the last record in the file.
5	NSLDS will transfer the file to COD via SAIG.

4.2. Responding (or Destination) System Responsibilities

COD Functional Specifications

#	Description
1	COD will retrieve the file from SAIG
2	COD will sweep up the staged Borrower Outstanding Balance file and parser the data.
3	COD will write the data from the Borrower Outstanding Balance file to the COD Oracle database

Section 5. Business Rules and Logic

Field format/data element	Business Rule
Alphanumeric	All characters will be left justified and padded with spaces. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Numeric/timestamp/date	All characters will be left padded with '0'. If it is blank/null, the length for the location of the field will be padded with '0'.
All fields	If the length of the source exceeds the maximum length of the data element, the source will be truncated.

Section 7. Interface Assumptions and Dependencies

7.1. Assumptions

#	Assumption
	Operational Assumptions
1	The Loan-Level BOB file will be delivered through SAIG.
2	The NSLDS system will execute in a batch TSO (time sharing option) environment.
3	The COD System will execute in a Red Hat Linux environment.
4	Both COD and NSLDS will be able to integrate with SAIG.
5	Batch job failures will be captured by Operations software on the Linux server.
	Functional Assumptions
7	NSLDS DB2 contains information required to create the Loan-Level BOB file.
8	COD will process the Loan-Level BOB file. The rules for processing the file are beyond the scope of this document.
9	COD will not send a response or receipt file.
10	The two baseline Loan-Level BOB files will contain all Direct and FFEL loans which have or had an outstanding balance greater than zero on or after July 1, 2013, or have or had an open status on or after July 1, 2013.
11	The two baseline Loan-Level BOB files will not contain any loans whose Most Recent Balance Date is before July 1, 2013.
12	The weekly delta Loan-Level BOB files will only contain changes to Direct and FFEL loans which have or had an outstanding balance greater than zero on or after July 1, 2013, or have or had a zero balance and with an open status on or after July 1, 2013.

7.2. Dependencies

NSLDS and ESB are dependent on the network and Data Center managed by the VDC, and COD is dependent on the network managed by Amazon Web Services.

Section 1. Interface Control Specification

Interface Name *	COD/EDW&A-NSLDS OIG Reconciliation Data File
Interface Type *	Unidirectional
Interface Short Description *	<p>This document defines the processes utilized by COD/EDW&A and NSLDS to transmit the OIG Reconciliation Data Files via SAIG (Student Aid Internet Gateway).</p> <p>NSLDS will create the OIG Reconciliation Data Files to provide COD/EDW&A with a way to reconcile data within EDW&A. The OIG Reconciliation Data Files will consist of thirty eight different detailed record layouts which will be associated with thirty eight distinct message classes. The message class name will help COD/EDW&A identify what is the record type of the file. The OIG Reconciliation Data Files will be accepted and processed by COD/EDW&A.</p>
Requesting (Source) Application *	NSLDS is the source application of the OIG Reconciliation Data File
Responding (Receiving or Destination) Application *	COD/ EDW&A is the destination application of the OIG Reconciliation Data File
Technical Requirement References *	<p>NSLDS is the source application of the OIG Reconciliation Data File</p> <p>Source TG Mailbox (Production): TG50012 Source TG Mailbox (Test): TGM8699</p> <p>Destination TG Mailbox (Production): TGN4866 Destination TG Mailbox (Test): TGD5024</p> <p>See See Appendix C - OIG Reconciliation Message Classes and BAT IDs for Specific Message Class breakdown</p>
Interface Usage Frequency *	NSLDS will send these files monthly on the 2 nd Thursday of each month. EDW&A will consume these files on the 22 nd of the month.
Interface Usage Volume *	See Appendix E, File Volumes.

Section 2. Interface Overview

2.1. Flow Diagram

2.2. Flow Diagram Description

1. The NSLDS OIG system interface will initiate a process to create the Reconciliation Data Files.
2. NSLDS will send the OIG files to COD/EDWA via SAIG.
3. The COD/ EDW&A scheduler will invoke the COD/ EDW&A Midrange server when a file is received and a Load data job will then process the Reconciliation Data File.

2.3. Usage Scenarios

NSLDS will send the OIG Reconciliation Data files to COD/EDW&A on 2nd Thursday of each month.

Section 3. System Information

3.1. Requesting (or Source) System Information

#	Type	
1	Production System Location	Plano, TX
2	Contracting Organization	BRIEFCASE Systems Development, Inc. (BSD)
3	Developer Location	Arlington, VA

3.2. Responding (Receiving or Destination) System Information

#	Type	
1	Production System Location	Amazon Web Services GovCloud West
2	Contracting Organization	Accenture
3	Developer Location	Washington, DC

Section 4. Interfacing System Responsibilities

4.1. Requesting (or Source) System Responsibilities

NSLDS

#	Description
1	NSLDS will create OIG Reconciliation data flat files formatted as specified on the File Specification section.
2	The detailed records will provide information related to awards that will allow EDW&A to perform reconciliation analysis.
3	NSLDS will send the file to COD/EDWA via SAIG.

4.2. Responding (Receiving or Destination) System Responsibilities

COD/EDW&A

#	Description
1	COD/EDW&A will receive the OIG Reconciliation data files on its server
2	COD/EDW&A will load the OIG Reconciliation Data into its database

Section 5. Business Rules and Logic

This interface enables NSLDS to send OIG Reconciliation Data files to COD/EDW&A. These flat files will be sent through SAIG. There will be one type of record within each Reconciliation Data File.

The NSLDS will provide COD/EDW&A with 127 files representing 38 different tables. The difference between the files will be the file layout of the OIG Reconciliation Data Detailed Record. The file layouts for the SAIG Header and Trailer are available in the File Specification section. The detail record file layouts are available in Appendix D - NSLDS Table Structure.

For the monthly feed, the NSLDS shall be able to send all available data for that record type. COD/EDW&A will preserve all OIG Reconciliation files sent by NSLDS.

Type	Description
Alphanumeric	All characters will be left justified and padded with spaces. Unless otherwise noted in the file specification section, blank/null optional fields will be padded with spaces.
Timestamp/date	All characters will be non-formatted date values. If it is blank/null, the default values will be produced (e.g. a low end date shows as '00010101').
Numeric	All characters will not be left padded with '0'. If it is blank/null, the default values will be produced (e.g. '0').
All fields	If the length of the source exceeds the maximum length of the data element, the source will be truncated.

Section 6. File Specification

SAIG Header Record:

Description	Description	Field Format	Length	Start Position	End Position
SAIG Batch Header Identification	Constant "O*N05"	Alphanumeric	5	1	5
Destination SAIG Mailbox	Destination SAIG Mailbox	Alphanumeric	7	6	12
Constant spaces	Unused	Alphanumeric	7	13	19
Header Class Label	Constant: ",CLS="	Alphanumeric	5	20	24
Destination Message Class	Varies based on file type	Alphanumeric	8	25	32
Header XXX Label	Constant: ",XXX"	Alphanumeric	4	33	36
Text used to identify the next field in a Batch ID	Constant: ",BAT="	Alphanumeric	5	37	41
Batch ID	File Batch ID (Appendix C for Batch ID value)	Alphanumeric	Variable	42	Variable
Comma	Comma (At least one comma must be included after the File Batch ID)	Alphanumeric	Variable	Variable	Variable
Constant spaces	Unused (Record must exceed 70 characters)	Alphanumeric		XX	>=70

Refer to Appendix D - NSLDS Table Structure for Detail Record Layouts.

SAIG Trailer Record:

Data Element	Description	Field Format	Length	Start Position	End Position
SAIG Batch Trailer Identification	Constant "O*N95"	Alphanumeric	5	1	5
Destination SAIG Mailbox	Destination SAIG Mailbox	Alphanumeric	7	6	12
Constant spaces	Unused	Alphanumeric	7	13	19
Trailer Class Label	Constant: ",CLS="	Alphanumeric	5	20	24
Destination Message Class	Varies based on file type	Alphanumeric	8	25	32
Trailer XXX Label	Constant: ",XXX"	Alphanumeric	4	33	36
Text used to identify the next field in a Batch ID	Constant: ",BAT="	Alphanumeric	5	37	41

Data Element	Description	Field Format	Length	Start Position	End Position
Batch ID	File Batch ID (Appendix C for Batch ID value)	Alphanumeric	Variable	42	Variable
Comma	Comma (At least one comma must be included after the File Batch ID)	Alphanumeric	Variable	Variable	Variable
Constant spaces	Unused (Record must exceed 70 characters)	Alphanumeric		XX	>=70

Section 7. Interface Assumptions and Dependencies

7.1. Assumptions

#	Assumption
	Operational Assumptions
1	The NSLDS system execute in a batch TSO (time sharing option) environment.
2	Both COD and NSLDS will integrate with SAIG.
3	Batch job failures including errors integrating with SAIG will be captured by COD/EDWA/NSLDS Operations.
4	zOS Language Environment with C/C++ support is available in NSLDS.
5	The NSLDS data transfer to OIG will not be affected by this.
6	NSLDS shall participate in IST with COD.
7	SAIG is responsible for ensuring capacity is available to store files being sent to COD.
	Functional Assumptions
1	The rules for processing the file are beyond the scope of this document.
2	COD/EDW&A will store and process the Reconciliation Data files from NSLDS.

7.2. Dependencies

NSLDS is dependent on the network and Data Center managed by the NGDC, and COD/EDW&A is dependent on the network managed by Amazon Web Services.
